## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Heo (6,167,192).

As to claim 1, Heo teaches a multi-channel audio decoder for receiving an encoded audio signal having at least two channels audio signals and decoding the audio signals, comprising:

An input for receiving the encoded audio signal (Fig.13B, 21);

A decoder (Fig.11, 11) for receiving the at least two channels encoded audio signal and providing a decoded output; and

A buffer, (Fig.11, 14), which receives the two channels of decoded audio signal, the buffer having a first portion (Fig.11, 12) and a second smaller portion (Fig.11, 13).

As to claim 2, Heo teaches where the audio decoder is a PCM audio decoder (Fig.15).

As to claim 3, Heo teaches post processing the decoded signal (Fig.12B, 17) prior to buffering.

As to claims 4-5, Heo teaches wherein the first portion of the buffer stores the first channel audio and then the second portion of the buffer stores the second channel audio signal (Col.1345-49), and where the first portion has a larger memory than the second portion (Fig.11).

As to claim 6, Heo teaches where the decoder comprises a plurality of audio format decoder including the standard AC audio decoding format (Fig.19)

As to claim 7, Heo teaches where in the encoded audio signal comprises at least 6 channels (Fig.13B).

As to claims 8-9, Heo teaches where multiple channels are produced at the decoder (Fig.13B).

With respect to claims 10-14, Heo teaches where the multiple channels include at least 6 channel and a buffer having a first portion and a second portion as addressed above (Fig.11 and Fig.13B).

Claims 15-19 are method claims analogous to claims 1-14, describing the steps performed by the multi channel audio decoder, and are rejected for the foregoing reasons by Heo.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Edwards (6,108,584), see Col.16, line 53-Col.17, lines 32.
